

Fact Sheet New Jersey Fire Service Needs Assessment

There has been substantial progress in reducing many fire department needs, although more remains to be done.

Protective Equipment and Clothing

The 2010 percentage of New Jersey departments **without enough equipment to equip all personnel** (or all personnel on a shift, as appropriate) was:

- 39% for **self-contained breathing apparatus (SCBA)**, compared to 51% in 2001 and 35% in 2005;

Departments Where Not All Firefighters on a Shift Are Equipped with SCBA

- 3% for **personal protective clothing**, compared to 2% in 2001 and 3% in 2005; and

Departments Where Not All Firefighters Have their Own Protective Clothing

- 18% for **personal alert safety system devices (PASS)**, compared to 31% in 2001 and 14% in 2005;

Departments Where Not All Firefighters on a Shift Are Equipped With PASS Devices

- 62% for **portable radios**, compared to 81% in 2001 and 58% in 2005.

Departments Where Not All Firefighters on a Shift Are Equipped with Radios

Training

In many fire departments, **not all involved personnel have been formally trained** in their emergency response duties. The 2010 percentage of New Jersey departments in which not all involved personnel have been formally trained was:

- 7% for **structural firefighting**, compared to 0% in 2001 and 10% in 2005; and

Departments Performing Structural Firefighting Where Not All Involved Personnel Are Formally Trained

- 29% for **emergency medical service (EMS)**, compared to 39% in 2001 and 42% in 2005.

Departments Performing EMS Where Not All Involved Personnel Are Formally Trained

Fitness and Health

In many fire departments, **there is no program to maintain basic firefighter fitness and health.**

The 2010 percentage of New Jersey departments with no such program was:

- 57%, compared to 62% in 2001 and 58% in 2005.

Unusually Challenging Incidents

There has been little or no progress in increasing the ability of fire departments to handle **various unusually challenging incidents** with local trained personnel and specialized equipment alone:

- Provide technical rescue and EMS at a **structural collapse** involving 50 occupants; and
- Provide hazardous material response and EMS at an incident involving **chemical or biological agents** and with 10 injuries.
- **Wildland/urban interface (WUI) fire** affecting 500 acres; and
- Mitigation of a **major developing flood**.

However, there has been progress in the percentage of departments having written agreements for working with others. The 2010 percentage of New Jersey departments with **no** such written agreement was:

- 61% for structural collapse, compared to 75% in 2001 and 45% in 2005;
- 50% for chemical or biological incidents, compared to 69% in 2001 and 46% in 2005;
- 50% for wildland/urban interface fires, compared to 74% in 2001 and 76% in 2005; and
- 50% for developing major flood, compared to 79% in 2001 and 55% in 2005.

Success requires more written agreements, with each participating department knowing its role, providing resources needed to play its role, and helping test the plan in simulations and rehearsals.

Stations and Apparatus

Some stations lack specific features, which are required by current standards but were not required when stations were constructed. Some stations are old enough that a variety of persistent or recurring problems are to be expected and replacement might be better and even cheaper. Some departments are using old fire apparatus.

- 43% of New Jersey fire departments do not have backup power for their fire stations.
- 28% of New Jersey fire departments do not have exhaust emission control for their fire stations.
- 77% of the fire stations in New Jersey are over 40 years old.
- 2% of New Jersey fire department engines and pumpers are at least 30 years old.

Cautions on interpretation

Trends. For some states and most needs assessment survey questions, even large changes from one survey to another will not be statistically significant. Be cautious in interpreting results as trends.

State-to-state comparisons. States where a large share of departments serve small communities will tend to have greater needs according to the measures used here than states where a small share of departments serve small communities. State-to-state comparisons must be viewed with caution, particularly if the states have very different mixes of urban and rural communities.

How rural is New Jersey? The survey for New Jersey was based on the following responses:

- 21 of the 61 departments protecting populations of 25,000 or more;
- 33 of the 122 departments protecting populations of 10,000 to 24,999; and
- 34 of the 293 departments protecting populations of less than 10,000.
